EAGLE PLASTIC DEVICES Nylon Panel Fasteners

KEY-HOLE CLIPS

The key-hole shaped interior allows the part to collapse more completely for easy assembly with finger pressure, and the tapered, bullet-style point slides into any hole easily. The angled panel lock section takes up slack in panels to provide for a tight assembly. The design allows for a relatively large clip diameter to hole size ratio, resulting in higher retention force. Parts can be tooled for a large variety of hole and panel variations.

RATCHETING ACTION RIVETS

Ratcheting action rivets feature a rigid design which provides an outstanding bond created by the action of the interlocking gripper teeth. With the larger head diameter, ratcheting action rivets make binding of soft materials a simple application.

- Molded in black nylon 6/6.

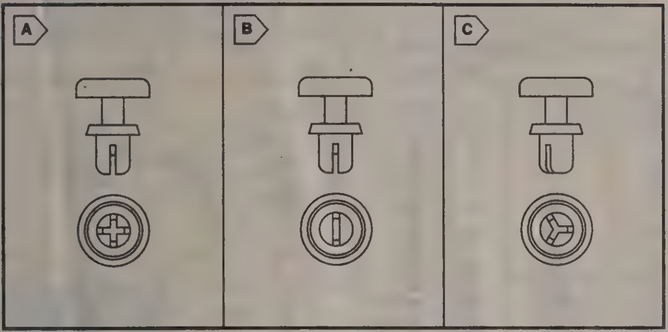
EAGLE PLASTIC DEVICES Nylon Panel Fasteners

SNAP RIVETS



Nylon Snap Rivets are designed for assemblies requiring fast and economical fasteners that can be installed without tools. The 2 piece molded fastener comes assembled ready for use. The rivet is placed in the hole and the smooth, oversized head is pressed. The specially designed legs expand and firmly lock the components permanently in place. Snap rivets are molded in high dielectric (UL94V2) Nylon 6/6 making them ideal for electronic applications.

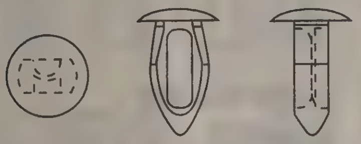
NYLON ARROW CLIPS

Arrow clips are reusable, molded nylon fasteners that feature an inexpensive fast method to hand assemble metal, wood, plastic, composition, or other thin guage materials. The specially designed body compresses as it is forced through a prepunched hole and springs back to its original shape to lock the assembled parts securely. They provide an economical, electrical insulating, vibration, abrasion, and corrosion resistant connection.



For quantities greater than 10,000, call for quote.

TAMURA CLOSED LOOP HALL EFFECT CURRENT SENSORS

The Tamura Closed Loop Hall Effect Current Sensor feeds back an opposing current into a secondary coil wound on the magnetic core to zero the flux produced in the magnetic core by the primary current. The output current of a closed loop current sensor is an exact representation of the primary current scaled by the number of turns in the second coil.

Features:
- Measures: DC, AC, and Pulsed waveforms
- Galvanic Isolation
- Zero Insertion Loss
- Fast Response
- Cost Effective

Specifications:
- Specifications are measured at +25°C, Load Resistor 10kΩ
- Operating Bandwidth: DC-200kHz 1dB (At higher frequencies derating is required to prevent core from overheating)
- Insulation Resistance @ 500VDC: more than 500MΩ
- Operating Temperature: -10°C to +85°C
- Output Linearity: ±0.25%
- Response Time: 1µ sec.

INTEGRATED PRESSURE SENSORS

To make the designer's job even easier, Freescale integrated devices carry sensor technology one step further. In addition to the on-chip temperature compensation and calibration offered currently on the 2000 series, amplifier signal conditioning has been integrated on-chip in the 4000, 5000 and 6000 series to allow interface directly to any microcomputer with an on-board A/D converter. The signal conditioning is accomplished by means of a four-stage amplification network, incorporating linear bipolar processing, thin film metallization techniques, and interactive laser trimming to provide the state-of-the-art in sensor technology.

Features:

- Broad portfolio of packaging and porting options for design flexibility
- Cost-effective
- Wide operating temperature range of -40°C to 125°C
- Fully signal conditioned, compensated and calibrated
- Interface seamlessly with Freescale processors
- Ratiometric to supply voltage

INTEGRATED PRESSURE SENSORS (CONT.)

To make the designer's job even easier, Freescale integrated devices carry sensor technology one step further. In addition to the on-chip temperature compensation and calibration offered currently on the 2000 series, amplifier signal conditioning has been integrated on-chip in the 4000, 5000 and 6000 series to allow interface directly to any microcomputer with an on-board A/D converter. The signal conditioning is accomplished by means of a four-stage amplification network, incorporating linear bipolar processing, thin film metallization techniques, and interactive laser trimming to provide the state-of-the-art in sensor technology.

Features:

- Broad portfolio of packaging and porting options for design flexibility
- Cost-effective
- Wide operating temperature range of -40°C to 125°C
- Fully signal conditioned, compensated and calibrated
- Interface seamlessly with Freescale processors
- Ratiometric to supply voltage

ECONOBOX ALUMINUM DIECAST ENCLOSURES

Bud offers fifteen box sizes, each with a close fitting flanged cover fastened to bosses in the body with screws. This, plus the thickness of the #ADC-10 aluminum alloy, offers excellent screening properties. These lightweight easy to machine enclosures have a number of uses: instrument and meter cases, filter networks, junction bosses, switching and many other applications requiring a small box. In addition, they're ideal for concealed or other interior use where a safety closure is necessary. Finish: Natural or Gray.

The FPC (Fan Performance Curve) is measured from the air chamber. The SRC (imaginary System Resistance Curve) must also be measured in the air chamber as it pertains to each application. The intersection of the FPC and SRC is the operating point (OP). Qb and Pb meet the requirement characteristics of the application.

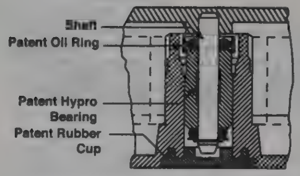
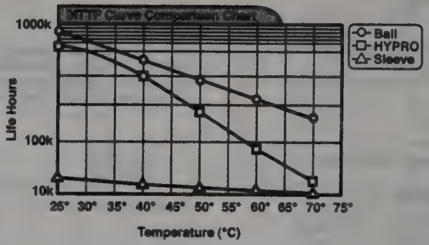
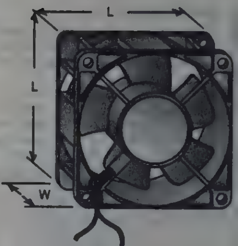
ADDA DC and AC Brushless Fans



Adda's patented hypro bearing (hyp) solves the friction problem normally found in sleeve axial bearings. Traditionally the thrust plate floats on a film of oil which rapidly depletes. Sintered alloy bearings draw oil from the cavities to extend the thrust float. Adda's hypro goes beyond this by actually developing a hypro wave in the I.D. bearing center where a recess oil reservoir is located. This center point actually runs cooler than the outer surface of the bearing and promotes cold to hot flow circulation. Adda's oil recirculation method and lubricant seal greatly extends the life of the fan.





Standard DC Fan

ADDA DC BRUSHLESS FANS WITH HYPRO BEARING

Features:

- ADDA's patented Hypro bearing uses oil recirculation to extend the life of the fan by more than 50,000 hours versus ball bearing fans.
- All products are tested to stringent 6-Sigma quality in addition to statistical process control.
- ADDA performs periodic audits on each product to ensure the best quality control.

Specifications:

- Frame housing and impeller: Black PBT per UL94V-0, glass-filled
- Operating temperature: -10°C ~ 70°C
- Lead wire termination

These brushless DC fans automatically adjust their speed, depending on measured temperature. The internal circuitry adjusts the fan speed, using and externally connected temperature sensor (LZ370). This means at lower temperatures, the fan runs at a quieter, lower speed.

Are you sure your equipment passes the test? Rely on Fluke Multimeters, ScopeMeters, and accessory kits to keep your equipment running smoothly.

Designed for electronic engineers, Fluke introduces its new 287 True-RMS electronic multimeter with TrendCapture graphing capability to review logged data. The corresponding TLK287 accessory kit contains multipurpose test leads, probes, and clips.

Fluke's 8846A 6.5 digit precision multimeter is precise and versatile enough to handle demanding measurements on the bench or in a system. And its corresponding TL2X4W-PTII 2x4 wire ohms test lead accessory performs 4-wire measurements with only two test leads.

The Industrial ScopeMeter® 125 simultaneously measures and checks waveforms, as well as power measurements and bus health.

TRIAD Power Transformers

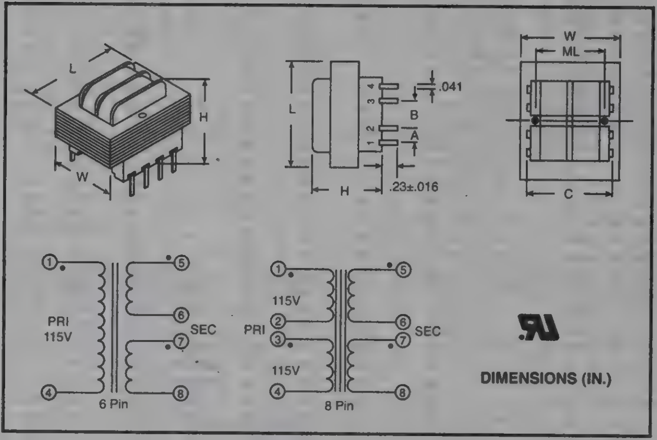
TRIAD SPLIT-PACK® POWER TRANSFORMERS

The Triad Split-Pack® split bobbin transformer is an extremely versatile tool for PC board applications. Split-Pack® transformers are nonconcentrically wound with primaries and secondaries side-by-side. Unlike the secondary on-top-of-primary designs of standard PC board transformers, the split-bobbin winding and low capacitive coupling eliminate costly electrostatic shielding.

Features:

- Primary: 115/230VAC 50/60Hz
- Hi-pot tested at 2,500VRMS
- Class B UL recognized
- PC terminal pin spacing for accurate placement

Series connections: 230VAC
Primary: input 1 and 4, connect 2 and 3
Secondary: output 5 and 8, connect 6 and 7
Parallel connections: 115VAC
Primary: input 1 and 2, connect 1 and 3, 2 and 4
Secondary: output 5 and 6, connect 5 and 7, 6 and 8



* Has 4 mounting holes on 2.188 x 1.75 centers

TRIAD FLAT PACK POWER TRANSFORMERS

The Triad Flat Pack power transformer is designed to meet the needs of low clearance PC board and solid state power designs. These units can also be used for control and instrumentation applications. Voltages and currents were chosen for widely used power applications. It is offered in a dual primary and dual secondary configuration.

Features:

- Split bobbin with side-by-side windings to reduce capacitance and eliminate the need for a static shield
- Low profile: Allows 3/4" card spacing for 2.5 VA units, allows 1" card spacing for 6 VA units, allows 1 1/4" card spacing for 12 VA units

Specifications:

- Hi-pot tested at 2000 VRMS
- Primary: 115/230VAC, 50/60Hz

TRIAD ISOLATION POWER TRANSFORMERS

For isolating equipment from direct connection to the power line. The primary and secondary are nonconcentric precision wound on separate arbors, assembled on a laminate core side by side separated by insulation. This prevents electrical connection, under normal or overload conditions, between the primary and secondary windings.

Specifications:
- Secondary voltage: ±5%
- Leakage current from primary to secondary is rated at less than 50μA and is typically measured at less than 10μA
- Hi-pot tested at 1500V
- Units with "M" suffix have 2-wire 6' cord, plug and socket.
- Line cord, plug and receptacle are UL listed and verified to meet federal specifications

VISHAY FunctionPAK™ DC-DC Converters

SINGLE OUTPUT FULLY INTEGRATED DC-DC CONVERTERS

FX5545 Series

Simplified LAB Assembly Configuration for all Models

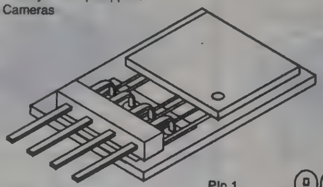
The DC/DC converter is a programmable topology synchronized Buck or Boost converter for today's continuous changing electronic market. The DC/DC converter provides flexibility of utilizing various battery configurations and chemistries such as NiCd, NiMH, or Li+ with input voltage range of 2.5V to 6V. An additional flexibility is provided with topology programmability to power multiple loads such as power amplifiers, microcontrollers, or baseband logic IC's. For ultra-high efficiency, converters are designed to operate in synchronous rectified PWM mode under full load while transforming into externally controlled pulse-skipping mode (PSM) under light load. The DC/DC converter is available in 20-ports BGA package for production. Convenient 8-pin plug-in modules are available for prototyping. In order to satisfy the stringent ambient temperature requirements, the DC/DC converter is designed to handle the industrial temperature range of -40°C to +85°C, with no cooling or derating.

Features:

- Specially designed for prototyping in LABs with limited assembly equipment
- Fully integrated DC/DC converter
- No external components required
- Buck and Boost configurations
- High efficiency over large load range 100% duty cycle
- Power density - more than 380W/inch³
- 1μA shutdown current
- 2.5V to 6V input range (1Li+ and 3-cell NiCd or NiMH cells)
- 0.9V to 6V output voltage
- Programmable PWM/PSM controls
- Low output ripple
- 1260 Temperature range: -40°C to +85°C
- Standard socket construction or plug-in for prototype (use BGA for production)
- Output power 10W
- Maximum continuous current 3A

Applications:

- Cordless phones, PDAs and others
- Supply voltage source for low-voltage chip sets
- Point of Load (POL) applications such as drivers for FPGA's, microprocessors, DSP's, amplifiers, etc.
- Portable computers
- Battery back-up supplies
- Cameras



What is FunctionPAK™?

FunctionPAK is the generic name of the multichip module (MCM) product lines offered by Vishay. The name was chosen to emphasize two things:

1. The products offered are complete circuit functions, not partial solutions. DC/DC converters offered by many other integrated circuit (IC) manufacturers are silicon chips that provide the base circuit application. However, the end user must then select the approximately 18 other components that surround the silicon device in order to make it a complete circuit solution. The selection of those components and the board layout affect the resultant performance, so that the efficiency defined by the IC manufacturer is not the same as the efficiency achieved in the customer's complete circuit. When purchased as a complete function, a single package contains all circuit components and is fully tested with all circuit performance parameters defined exactly as used in the customer's system.
2. The products are offered as complete circuits in monolithic packages with all the resultant savings in design time, purchasing, stocking, assembly, board space, testing, etc. It is worth noting that many applications are developed by digital engineers who prefer to leave integration to the analog engineers and appreciate the opportunity to obtain a complete circuit in one package.

PIN DESCRIPTION	
PIN	DESCRIPTION
SD	Logic low on SD pin shuts down the FunctionPAK completely and decreases current consumption to less than 1μA.
PWM/$\overline{\text{PSM}}$	Logic high =PWM mode, logic low =PSM mode. In PSM mode synchronous rectification is disabled.
SYNC	Externally controlled synchronization signal. Logic high to low transition forces the clock synchronization. If not used the pin must be connected to Vin or logic high.
Vin	Input supply voltage
Vout	Output voltage
GND	Ground
Rext.	Included inside the package for all fixed output voltage converters. To be added externally for all self-selected output voltages.

NMPD01 SERIES - POWER OVER ETHERNET PD MODULES

The NMPD01 series of power extraction modules has full functional compliance with IEEE802.3af. They are designed to extract power from CAT5 Ethernet cable when sourced by a Power Sourcing Equipment (PSE) also conforming to IEEE802.3af. The NMPD01 series removes the need for localised equipment power source, significantly reducing installation costs. The IEEE802.3af standard allows for two power options, one on the data lines, the other on the spare pair. The NMPD01 series can have voltage input on the data lines or spare pairs. The NMPD01 series provides full signature and control as required by the PSE.

Features:
- Isolated DC output
- 3.3V, 5V, 12V & 15V output options
- IEEE802.3af full fucntional compliance
- Thermal shutdown
- RoHS Compliant per C&D Technologies documentation

For quantities of 10 and up, call for quote.
